NOTICE TO CONSIGNERS.

STEAMSHIP CAMELOT,

FROM GLASGOW, LIVERPOOL AND

STRAITS.

CONSIGNERS of cargo are hereby in-

formed that all Goods are landed at their risk into the Godowns of the HONG-

KONG & WILCOX, WHARF & GODOWN CO.,

at Kowloon, whence and/or from the

Wharves delivery may be obtained.

Original cargo will be forwarded unless

notice to the contrary be given before Noon

TO-DAY.

No claims will be admitted after the

Goods have left the Godowns, and all

Goods remaining undelivered after the 30th

Instant will be subject to rent.

All claims against the Steamer must be

presented to the Underwriters on or before

the 30th Inst., or they will not be recognized.

All broken, chafed, and damaged Goods

are to be left in the Godowns, which they will

be examined on the 30th Inst., at 3 P.M.

Claims of cargo will please take notice

that, before delivery can be obtained, they

must be paid the Advance Bond which is lying

at the Office of the Underwriters, and pay a

deposit of 5% on the net value of their

Cargo for contribution to General Average.

No Fire Insurance has been effected.

Bills of Lading will be countersigned by

THE CHINA MAIL.

That should the Silver bill be shelved for a time the Silver plack would be relieved to some extent of the heavy strain it is now carrying.

That there is a distant relative of Senator Stewart residing in this Colony who informs me in a jocular way that he would be grateful for a few tips, and a place on the great silver plack if practicable.

That, although my experience is considerable, never have I seen such varied and violent fluctuations in the price of silver, as has occurred within the last two years.

That my contention has been all along that something must be done to relieve this unnatural pressure, and I look for a considerable change with regard to silver exchange before the close of this year.

BROWNIE.

COLLEGE OF MEDICINE FOR CHINESE.

PRESENTATION OF DIPLOMAS BY SIR WILLIAM BROWNE.

This afternoon, His Excellency Sir William Robinson, K.C.M.G., presented the diplomas and prizes gained by students of this College. His Excellency presided, and among those present were—Mr Fielding Clarke, Chief Justice, Rector of the College; Dr. Charles, Dean of the College; Hon. E. K. Bellairs, Hon. J. H. Stewart, Lockhart, Registrar-General; Hon. Dr. Ho Kai; Dr. Chalmers; Mr. J. J. Francis, Q.C.; Dr. J. C. Thomson, Secretary to the College; Mr. Hugh McCallum; Mr. Charles Ford, Major-General Gordon; Mr. H. E. Wodehouse, Rev. Burdon, Lieut. J. T. Sterling, Aide-de-camp to His Excellency; Lieut. Strick; Dr. Jordan; Dr. Carvalho; Hon. T. H. Whithead, &c. The audience included a large number of ladies.

Dr. Thomson said—Before, Dr. Clarke presents the students for the diplomas of the College, I have to ask Your Excellency to present the prizes which have been gained by the various students. The prizes have been awarded on the results of the professional examinations. The first student in each list has a prize, and in some lists two students come so close that two prizes were awarded.

The prizes were presented by His Excellency, the list of winners being—

Surgery—Kong Ying Wa, Main's Dictionary of Medicine.

Medicine—Sun Yat-Sen, Tanner and Monck's Disease of Infancy and Childhood.

Midwifery—Sun Yat-Sen, Newman's Surgical Diseases of the Kidney.

Med. Jurisprudence—Kong Ying Wa, Wood's Illustrated Natural History.

Hygiene and Public Health—Sun Yat-Sen, Bowby's Injuries and Diseases of Nerves.

Material Medicine—Wong I. Tok, Wilson's On the Continued Fever.

Physiology—Wong I. Tok, Onder's The Principles and Practice of Medicine; Chan, Man Shin, Louisa's Lectures on Fever.

Pathology—Wong I. Tok, Manson's The Filariæ Sanguinis Hominis.

Chemistry (Sci.)—Wong I. Tok, Winckel's Midwifery; Song Chong Chai, (Jun.) Cook's Tables of Anatomy.

Otology—Hui Teak Teau, Castile's Naked Eye Anatomy; Song Chong Chai, Cook's Tables of Anatomy.

Botany—Wong I. Tok, Ewart's The Bronchi and Pulmonary Blood-vessels; Wong Enoch, Thomson's Zoology.

THE DEAN'S SPEECH.

The Dean said—The distribution of the certificates of license to practise medicine, surgery and midwifery, which Your Excellency, on behalf of the College, has now delivered to the young men presented to you, is an event of more than ordinary interest. The Licentiates are the offspring of a work which started, as we have been engaged in for the past five years; and which, only to-day reaches its first stage of development. But still more important are the men in the Institute from which these young men emanate, inasmuch as they are the first recipients of its qualifications. Older institutions have the reward of yearly sending forth its young graduates, but owing to our youth we have had no such satisfaction. For five long years we have had to plod on in determining silence with only this red-letter day bringing somewhat mystically in the future. The College of Medicine for Chinese was inaugurated in this Hall in 1887 at a large public meeting under the auspices of the then Acting Governor, His Excellency General Cameron, C.B. By his grace and wise counsel the promoters of the College were encouraged in their efforts, and every facility provided for their wishes.

The first paper given by His Excellency Sir William De Vaux in this Colony was in connection with the College, and his ready help was at all times welcomed and appreciated. More recently still His Excellency General Barker forwarded the interests of the College with all the power of his official position. It has fallen to your lot, Sir, to see the result of the work commenced and for ever under the auspices of your distinguished predecessors, and the fact of Your Excellency's presence here to-day proves that you regard their efforts with approbation.

A PLATE FOR SUPPORT.

Whilst extending to you a hearty hand of greeting, we hope that it is an augury of Your Excellency's intent to continue the support so freely given by your distinguished predecessors! That we need such support is more than ever apparent, and whilst Your Excellency holds the reins of office, our greatest wish is that you may interest yourself in its welfare, that you may aid its Licentiates, and that you may exercise the prerogative of your high position to enable an endowment to be obtained for its support (cheers). Although we appear, today in all the glamour of publicity you must know that we have had many anxious moments concerning the maintenance of the College. We have had many recent successes, but still more have been the dogged determination of some persons, the majority of others. As now, we see, and now that the first stage as reached to-day is realized we have no anxiety as to the future.

CHARACTERISTICS.

The lack of interest has not been with the students of the College. Anyone who knows the Chinese well, but slightly is well aware that steadiness of purpose is perhaps the most constant characteristic.

their national history, be it in the overthrowing of usurping rulers or the overthrow of their enemies, their constancy of purpose has always prevailed. Time shakes them not from their seats, nor weakens the ardour of their understandings.

WHAT WILL BE THE FUTURE?

The general effect of the work done in the College, therefore, will be beyond the human suffering can be relieved by the most advanced methods known to the healing art, but these are but as chance flicks of ocean foam to the winds on the sea-shore in proportion to the work to be done. It is only at the door of this huge empire of the sons of such a people that we have to do, and having once taken up a subject, be it science or war, it is not in their nature to retreat.

THE MANAGEMENT.

Now are the members of the Court of the stamp of men who are easily driven from their fixed purpose. When I mention the name of Sir James Russell, our late Rector; Dr. Fielding Clarke, our present Rector; Dr. Chalmers, the Hon. E. R. Bellairs, the Hon. Ho Kai, Mr. Francis and Dr. J. C. Thomson it is a fact of which I am sure that the affairs of the College are in the hands of men who may be said to have gained their positions in life by personal merit, but more still by dint of intrepidity, courage and by keeping their feet consistently towards attaining the goal of their ambition. It is by such men that the College has been brought thus far in the thorny career of its infancy, and with such men at the helm is it to-day launched into us hope a swelling ocean of youth (cheers).

THE TEACHERS.

The third element in the constitution of this educational body, the teachers, are, however, the be-all and the end-all of its existence. The struggle has been a long one and the result of our five years' campaign has resulted in one death, eight retired and ten missing. The death of Dr. Young lost us a most valuable member of the Court, and created a vacancy in the Chair of Midwifery. The retirement were Surgeon-General Lower and the others were the officers of the Army Medical Staff, who owing to change of station have had to leave the Colony and whose successors, not having been present at the birth and handing over of the College, have never taken up an interest in its work. Dr. Manson, the first Dean, has been a great loss, but we know that he has retired he is not disaffected. The ten remaining constitute the heaviest item of our loss. They are composed mostly of Chinese who had their names associated with important Chairs for a time, but when, the hour of lecture came, found that their engagements would not permit of their undertaking the duties and dropped out, leaving us at the moment but one to manage as best we could. Some lecturers bravely tried combinations with teaching various branches, but gave it up in hopeless despair. The pupils did not respond sufficiently quickly. This sir, has been our greatest difficulty. The Chinese have not been that we have been without money, the teachers have done their work gratuitously, and books and apparatus, have been supplied to the students by members of the staff. It is what we contemplated would be our difficulty, namely, dissipation and apathy, which has robbed us of many excellent men and caused us to stagger under a load which at times threatened to crush us hope and all our existence. And yet again, in my moment, on triumphant review, and as we look down our list of lecturers and examiners, we may well be proud of the names we contemplate, and whilst regretting the loss of quondam friends and forgetting all, gradus a nobis, we must remember the words of the Chinese proverb that the good cannot be polished without friction nor man perfected without adversity (cheers).

THE WORK OF STUDENTS AND TEACHERS.

The course of study pursued is exactly similar to that laid down by medical schools in Britain, and indeed we anticipated them inasmuch as we set out with the intention of a five years' course which only this year has become law at home. The appliances, although limited, are not deficient. In botanical work no complete field or complete system of education could be enjoyed than that provided by the excellent Botanical Gardens in the Colony by the distinguished teacher of Mr. Charles Ford, F.R.S.

In Chemistry we lost the services of that valuable chemist and teacher Mr. W. S. Crow, but Mr. Weston, with energy and ability, has fulfilled the duties of the Chair in a manner to anticipate he would

have done. If ever this red-letter day were to be the teacher of the discoveries of its sons (cheers). A few busy doctors and godlike men for living years have unfortunately devoted their time to commence this instruction. The light has been under a bustle and their light has not shone before men, but still asking for recognition for these sons of education we are anxious that in future this touch of refinement which neither you know nor can easily extinguish (cheers).

IN CONCLUSION.

TO those of us engaged in the practical teaching of disease no more sufficient proof could be obtained than that afforded by the Alco Memorial Hospital, generously placed at the disposal of the College by its students by the London Missionary Society. This large Hospital more than satisfies the requirements of a medical school, and the institution of studies which has been established to test the fact that no Hospital

in Britain affords better opportunities for the practice of their profession. During the whole of their course the students have been daily in the out-patient room and wards. From their first entry until to-day these Licentiates have performed the duties of dressers in the out-patients' room and wards and assistants in the Dispensary. What is usually relegated to the meagre periods of six months and three months respectively, our students have spent five years at, and the lectures and examinations are quite well aware that in medical knowledge, in dentistry, in ophthalmics and in surgery, we have a place in the medical school of India.

It is a fact that our Licentiates have acquired a proficiency not to be attained by any and no other in the limited periods mentioned at their dispensary. Therefore, in presenting these Licentiates to you, we come not unblushingly in an apologetic manner to be forgiven for lack of opportunity in that we have not done better; but we present them to you and to the world with our heads erect and with no apology. We have taught them without remuneration, and our offering to the great Empire of China, where science is well unknown, where the ignorance of our own medieval times is current, where the astrologer stalks abroad with the belief

that he is a physician, where the art of surgery has never been attempted and where thousands of women suffer and die from the charmed potions of the witchcraft-practices of so-called obstetricians.

WHAT WILL BE THE FUTURE?

The general effect of the work done in the College, therefore, will be beyond the human suffering can be relieved by the most advanced methods known to the healing art, but these are but as chance flicks of ocean foam to the winds on the sea-shore in proportion to the work to be done. It is only at the door of this huge empire of the sons of such a people that we have to do, and having once taken up a subject, be it science or war, it is not in their nature to retreat.
